REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Application serial no. 10/676,107 is being allowed since none of the prior art of record teaches or fairly suggests a method for testing blood by measuring intracellular solutes or products of metabolism produced inside of red blood cells by mixing separated and washed red blood cells with a hypertonic solution at a temperature between 25-40°C for a time sufficient for the intracellular solutes to diffuse across the cell wall of the red blood cells and into the hypertonic solution, centrifuging the suspension of red blood cells in the hypertonic solution to obtain a supernatant containing the intracellular solutes, and measuring the supernatant for an intracellular solute chosen from the group consisting of glucose concentration, pyruvic acid concentration, lactic acid concentration, pH and oxidation-reduction potential. In particular, none of the prior art of record teaches or fairly suggests diffusing intracellular solutes from red blood cells across the membrane into a hypertonic solution at a temperature of 25-40°C.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
